

Workbooks.com launches greater functionality in its Spring Release.

READING UK - 29th March 2010. [Workbooks.com](http://www.workbooks.com) today announces the Spring 2010 upgrade to its service, including many significant new features and a number of enhancements.

“Most of our customers use our Workbooks service to drive their business and therefore we are always looking at ways to enhance it. We have collated feedback from them to make our service even better with features and functionality that adds value to their day-to-day business,” commented [John Cheney, CEO, Workbooks.com](#).

Ongoing improvements to the [platform](#) provide an improved user experience along with the functional enhancements to make the service even easier to use.

“This upgrade provides deeper analysis of opportunities, greater integration with a customers’ existing website and enhanced de-duping facilities amongst other improvements,” added Cheney.

As Workbooks is a cloud-based solution, customers will immediately benefit from these new features the next time they log on. They will not need to upgrade software, reconfigure hardware or call an engineer.
