

Job Specification

Job role: Graduate/Junior PHP Development Engineer

Reporting to: Head of Engineering

Location: Reading, UK

Overview:

Workbooks.com is looking to recruit a PHP development engineer to join our rapidly expanding business. As part of our engineering team you will be responsible for developing PHP based customer extensions for our cloud based CRM service and extending/maintaining our PHP Drupal based Website.

Responsibilities:

- Analysis, specification, design, development and testing of PHP applications for Workbooks customers to interact with the Workbooks platform and other third-party applications.
- Working with the Service Delivery Team and customers to clearly define the requirements for customer application development.
- To build good working relationships with customers and other members of the Workbooks team.
- Maintaining and extending our Drupal based website and community sites including the development of custom PHP extensions.
- To be professional and conduct yourself with integrity at all times.

Skills & Experience required:

Candidates should be able to demonstrate directly relevant experience including:

Essential Skills

- Understanding of Web Application development using modern HTML/CSS, JQuery/AJAX, PHP or other languages.
- Knowledge of Full Software Lifecycle.
- Attention to detail and a high standard of work.
- Use of source code control systems, such as Github or Subversion.
- A willingness to learn new skills and 'go the extra mile'.
- Good interpersonal skills and a being a team player.
- Ability to work with stakeholders from different departments.
- Problem solving, task prioritisation, communication, administration and organisation skills.

Desirable Skills

- Knowledge of PHP
- Experience of one or more Content Management Systems.
- Knowledge of Drupal Version 8
- Experience with Linux, Apache & MySQL
- The ability to use graphic design packages such as Photoshop or GIMP
